

NORTHWESTERN MONTANA UNITED WAY

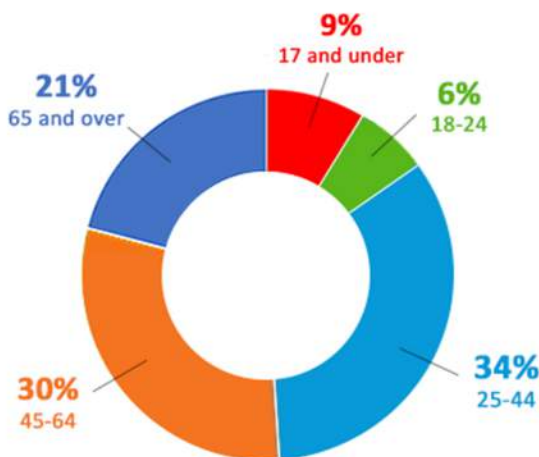

Health Impact Report

Over the years, FamilyWize and United Way have partnered to help 8+ million people save more than \$830 million on the prescription medications they need. This effort has helped improve the health and financial stability of individuals and families in our communities nationwide.

Profound changes to the U.S. healthcare landscape in recent years have resulted in rising costs for prescription medications and higher deductibles with longer deductible periods. As a result, it is estimated that millions of Americans of all ages are currently uninsured, or have deductibles that are too high for them to meet. For many of these individuals, the cost of prescription medication is prohibitive.

It is vital that people adhere to their medications as prescribed, which makes the partnership between FamilyWize and United Way more important than ever. Educating community members about their options when filling prescriptions will empower them to take better control of their health and medication costs. **Together, we can continue to support our communities in measurable ways.**
